

What is Parkside aiming to achieve through its Geography curriculum?

By studying a number of different physical and human processes, students will gain an in depth understanding of causes, effects and responses; enabling them to draw links and evaluate a wide range of significant case studies. Students learn to analyse how human activity and intervention affects the physical environment around us and how this will affect future generations and the global society around them. In Geography at Parkside students aim to become resilient independent and successful learners, improve their understanding of subject knowledge, cultivate their cultural capital, advance their literacy and numeracy skills, develop a range of metacognitive and transferable skills, apply the pride values and ethos ensuring positive relationships with students and staff, and experience a range of enrichment opportunities for prepare for the future.

Parkside School Subject Curriculum Plan

Subject: Geography KS3

PARKSIDE
